

Internal Locking Removable Bollards

Security and versatility are big parts of 1-800-BOLLARDS Internal Locking Removable Bollards. These bollards are nearly impossible to steal since they lock underground, inside embedment sleeves. The bollards can only be released by a key inserted into the flush mounted, tamper-resistant cam lock conveniently located near the bollard's top.

When the bollard is removed, the Embedment Sleeve's heavy duty lid closes over the opening for a smooth surface. The robust lid supports the weight of most vehicles and it can be secured into place.

Since the 12" long Embedment Sleeve (sold separately) is Stainless Steel, any scratches or nicks caused by bollard insertions and removals resist rust and corrosion.

These removable bollards are often mixed in with fixed bollards to allow vehicle access to a secure perimeter. That's versatility!

CAP STYLES

FEATURES

Steel Options

- STAINLESS – #4 Polished Finish Type 304, Type 316
- CARBON Powder-coated 200+ Color Choices

Standard Height: 36"

- Custom Lengths Available

Lock Options:

- Master Key or Individual Keys
